

**MARKET
SPACE**

MANIFESTO

We're the team of industry-leading experts building Market Space: the world's first global, universal trading platform.

Before starting our project, we analyzed all the digital marketplaces that exist today. We studied apps, online stores and platforms like Facebook Marketplace and noticed a gap. There is no mobile trading platform that's easy to use, convenient for consumers, and suitable for businesses of all sizes. Moreover, all the existing trading platforms in the world are pegged to specific currencies, making international transactions difficult and expensive.

To bridge the gap, we decided to build a platform that's intuitive, safe and compatible with all the fiat and crypto currencies in the world. This platform is called Market Space. Integrated into the platform is a Smart Wallet that lets consumers buy in any currency they own. Market Space and its Smart Wallet are both integrated into the premium Gem4me messenger. This will help the trading platform's early adoption, thanks to Gem4me's 5 million users and \$25,000,000 in financial backing (to date).

You likely know about the current wave of next-gen technologies like chatbots, blockchain networks, fintech algorithms and artificial intelligence. Market Space combines all these technologies (and many others) in a single platform. To compare, most other marketplaces feature none of these technologies. This means Market Space the most technologically advanced trading platform in the world today.

Our belief in the project's success is based on objective facts, relayed below.

Fact 1: 3 years of development and 5,000,000 users

As you already know, Market Space is integrated into the premium Gem4me messenger. Once the platform launched, Market Space will have easy access to 5 million leads spread across 60 countries. This real, tangible asset makes us different from hollow ICOs with nothing behind them.

Our second asset is intellectual. We spent the last 3 years building the Gem4me messenger: a premium app that has millions of users. We've learned a lot about app development in that time. Even more importantly, we've demonstrated that we can make a quality product and bring it to market successfully. When you put our intellectual assets together with Gem4me, you get a solid foundation for Market Space's future success.

Fact 2: we've already made billion-dollar projects

Our developers previously worked on Viber, Playtika, Xpresso, Qubo and other projects. We've made multiple billion-dollar mobile apps and blockchain networks so far. We firmly believe Market Space may be the next big project we work on. This is another reason to believe

Fact 3: support from Gem4me

Gem4me targets high-income users, which are underserved by mobile apps. As a result, it has an army of loyal users with plenty of money. Many of these users participated in Gem4me's crowdfunding rounds, meaning they also have a direct stake in Market Space's success. In other words, millions of loyal fans and thousands of co-investors are invested in Market Space's success.

Our goal is to make Market Space the world's top mobile trading platform. Modern technologies like blockchain and A.I. ensure our clients can trade safely, instantly and without losing money to currency exchanges.

We've been working on the project for over a year so far. In this time, we've completed most of Market Space's basic functions. Early April '18 will see the beta-version of a chatbot that populates Market Space with stores. The goal of this ICO is to make our project bigger and better—and to give you an opportunity to join us as an investor and partner.
